PROFILE

DevOps & Cloud Engineer focused on CI/CD pipeline automation, infrastructure as code (IaC) and container orchestration. My background in software engineering and full-stack development gives me a comprehensive view of product requirements, allowing me to design architectures and deployments that streamline the development team's workflow.

TECHNICAL SKILLS

Containers	Docker, Docker Compose, Kubernetes, Cilium
CI/CD & IaC	GitHub Actions, Jenkins, Argo CD (GitOps), Terraform
Cloud	Microsoft Azure (AKS, VM), Google Cloud (Cloud Run), OpenStack
Observability	Prometheus, Grafana · load testing with k6 · image scanning with Trivy
Systems	Linux, Bash, Nginx, computer networks
Programming	Python, TypeScript, JavaScript, Java, SQL
Development	React, Next.js, Angular, Node.js, Django, Spring Boot, REST APIs, microservices
Databases	PostgreSQL, MongoDB, Redis, Supabase
Collaboration	Git, GitHub, Azure DevOps, Jira, Scrum, Kanban

PROJECTS

Security & Resilience in Microservices Orchestration ↗

Master's thesis · in progress

- Google's Online Boutique (10 microservices) on Kubernetes, 2×2 design: what security and resilience cost and what they buy.
- Services in 5 languages with tests, linters, graceful shutdown and deadline propagation; k6 E2E tests with dependency failures.
- Minimal, digest-pinned, non-root images with zero Trivy findings; Docker Compose and a Dev Container per service.
- In progress: Istio (mTLS, circuit breaker), Cilium, Chaos Mesh, MTTR in Grafana; AKS via Terraform, GitHub Actions, Argo CD.

`Kubernetes` `Istio` `Terraform` `Azure AKS` `Argo CD` `GitHub Actions` `Docker` `Cilium` `Chaos Mesh` `Prometheus` `Grafana` `k6` `Trivy`

msc-soccer-project ↗

Master's project · completed

- Ionic/Angular app with two interchangeable backends: Node + MongoDB and Spring Boot microservices (Eureka, Gateway).
- 4 CI and 4 CD pipelines with GitHub Actions to Cloud Run; tests with Jest, JUnit, Testcontainers and Cypress.

`Angular` `Ionic` `Node.js` `Spring Boot` `MongoDB` `PostgreSQL` `Firebase` `Cypress` `Docker` `GitHub Actions` `Cloud Run`

Stratify ↗

Bachelor's thesis · completed

- Platform to design, simulate and run algorithmic crypto trading strategies via CCXT, with OAuth and JWT authentication.
- Azure VM hardened with Bash scripts; Docker Compose, Nginx with Let's Encrypt and internal-CA TLS to PostgreSQL and Redis.

`React` `TypeScript` `Django` `PostgreSQL` `Redis` `Docker` `Nginx` `Azure`

Portfolio & Notes ↗

Personal website · live

- Next.js static export to GitHub Pages, deployed only when CI (lint, type check, formatting and build) passes on main.
- SHA-pinned Actions, least-privilege permissions per job, Dependabot and a Dev Container with Docker Compose.

`Next.js` `TypeScript` `GitHub Actions` `GitHub Pages` `Docker`

EXPERIENCE

Full Stack Engineer · DEVyond · Internship, remote

Sep 2026 – Nov 2026

- Develop web interfaces and components with Next.js and TypeScript.
- Integrate backend services and databases with Supabase and Payload CMS in a remote agile team.

Frontend Developer · Trainingym · Internship, Almería (hybrid)

Feb 2025 – Apr 2025

- Built web interfaces and components with AngularJS and TypeScript.
- Managed tasks in Azure DevOps and Jira across the full software development lifecycle using agile methodologies.

EDUCATION

MSc in Computer Engineering

Sep 2025 – Feb 2027

University of Almería · Specialization in Web/Mobile Development

BSc in Computer Engineering

Sep 2021 – Jun 2025

University of Almería · Specialization in Software Engineering · GPA: 8.02/10

LANGUAGES

Spanish · Native

English · Fluent

Cambridge B2 First (FCE)
